

ISLAND SKY™ Corporation, USA, a wholly-owned subsidiary of Island Sky Australia Ltd, has patented a technology for converting atmospheric water vapor into potable water. The technology provides a highly economical means for producing pure drinking water from the humidity available in the air.

Many places in the world experience severe drought conditions, creating a shortage of clean water to drink or to bathe in. Despite widespread water pollution and drought, there is an abundance of water around us — in the air we breathe. The Company's patented technology allows its Island Sky® products to extract pure water from the air at a low cost.

The performance of products using Island Sky® technology surpasses all other available products in the world for transforming water vapor into potable water. The technology increases the dynamics of condensing water vapor at a temperature below the dew point for a given relative humidity condition.

Island Sky® currently has two product offerings; Skywater™ 14 and Skywater™ 300.

Skywater™ 14 is a home/office model with the capacity to produce up to 14 gallons (52 liters) of great tasting drinking water per day from atmospheric water vapor for as little as *\$0.16 (USD) per gallon (\$0.04 per liter) in electricity consumption for the 110v models. The Skywater™ 14 water making machine requires no plumbing and is similar in size to the common water cooler.

*($\$0.08$ per gallon, $\$0.02$ per liter in 220v models. Cost of electricity varies.)

Skywater™ 300, is a 300 gallon per day capacity (1100 liters) whole-house system, and is planned for release 2008. Skywater™ 300 is designed to supply all of the water needs of a single family home. Many homes throughout the world are not connected to municipal water sources and have to rely on well water or water tankers for their daily water needs. Island Sky machines® provide a practical alternative to such remote areas. Under optimal conditions Skywater™ 300 will produce 1 gallon (3.785 liters) of water for approximately \$0.02 (USD) per gallon.

Island Sky® presents the first breakthrough in the air-to-water technology field in over 45 years. This new technology radically improves the efficiency of air-to-water collection. The result is a product without the limitations that have kept all previous attempts in this field from achieving their full potential as an alternative water source.

Clean drinking water is one of the world's most valuable commodities and is becoming increasingly scarce. The mission of the Company is to provide low cost, high-quality drinking water throughout the world and to provide critical emergency drinking water equipment to relief agencies for crisis areas where potable water is unavailable.
